

Welcome to the cereneo patient journey

Prof. Andreas Luft, Medical Director cereneo

“Neurorehabilitation aims at getting you back to a normal life without disability. This may be a challenging process which cannot be accomplished during your inpatient stay. cereneo has built a unique concept to help patients along their entire recovery process and ensure a seamless support.”

1

Inpatient Rehabilitation

The initial phase of our patient journey focuses on creating a strong foundation for your successful and sustainable rehabilitation by using our in-house robotics and data driven research to develop a personalized treatment plan supported by our round the clock professionals.

- ✓ Interprofessional team of neurorehabilitation specialists
- ✓ Customised treatment plans for each patient
- ✓ Implementation of our innovative evidence-based research & technologies into practice to test efficiency & efficacy
- ✓ Inhouse robotics

2

Transition Home

Phase 2 of your recovery focuses on re-integrating re-learned neuropathways into your home environment through a domiciliary assessment (i.e.: advising on necessary equipment and technology, assistance in setting up our telerehabilitation platform etc.) and ensuring you, our patient, of a seamless transition from any inpatient rehabilitation clinic to your home.

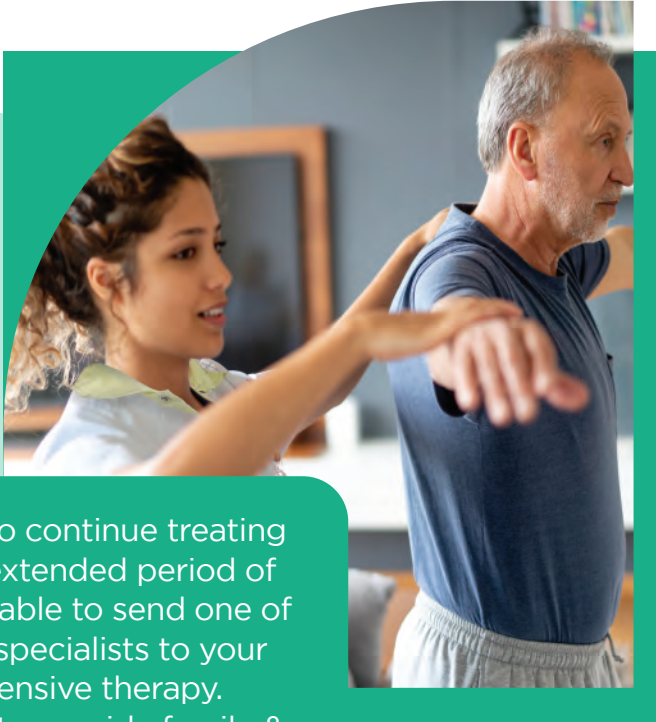

- ✓ Access to cereneo trained specialists who have supported many patients on their transitions from any post-acute facilities to their homes
- ✓ One point of contact to assist you through decisions & questions you may have
- ✓ Training of family members and caregivers locally

3

Rehabilitation at Home

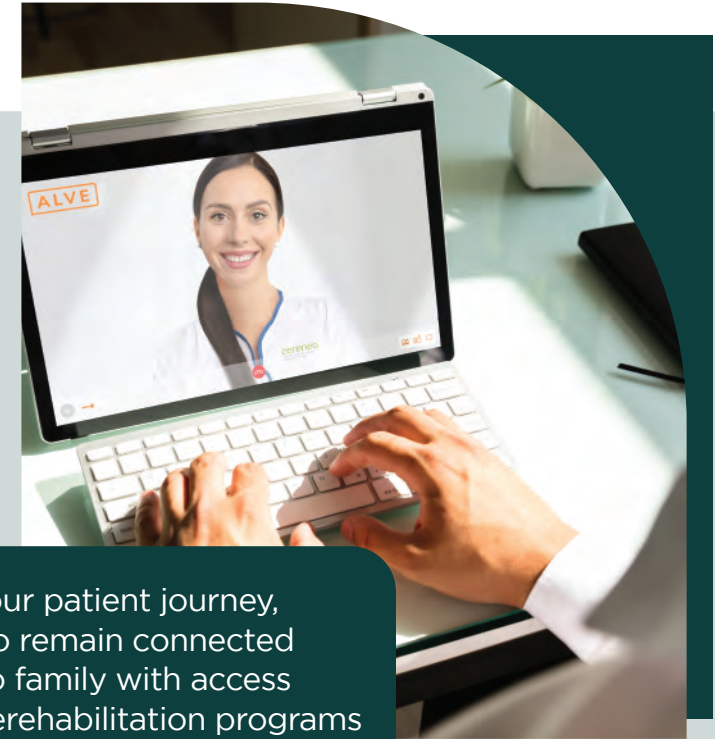

If you would like us to continue treating you at home for an extended period of time, we will also be able to send one of our cereneo trained specialists to your location for more intensive therapy. We will also be able to provide family & caregiver education to ensure that you are in the best hands once we leave you.

- ✓ Continued progressive therapy in the comfort of your home
- ✓ Reintegration of your relearned activities of daily living within your home
- ✓ Continued support from a cereneo trained specialist
- ✓ Training of family members and caregivers locally

4

Tele Rehabilitation

With Phase 4 of our patient journey, you can choose to remain connected with your cereneo family with access to our flexible telerehabilitation programs as you become more independent and regardless of your location. To do this, we will use our in-house telemedicine platform to ensure your progress and make data driven therapy adjustments.

- ✓ Training independently with oversight from your specialist
- ✓ Added benefit of continued support & advice from your cereneo therapist
- ✓ Use of sensors as a means to measure progress, discuss results and receive adapted therapy plans regularly

Riju Jhunhunwala

„When you come to a place like cereneo, you expect magic. I never doubted the plan I received from cereneo and had full faith in the interprofessional team and their assessment. With the help of cereneo I managed to recover, return home and enjoy time with family and friends again.“

Christian Riddersma

„cereneo showed me everything that is possible. It's the best that could happen to me after such a severe disease. Furthermore, the online support & therapies are crucially important to me. Great physicians, great therapists - thank you! “

As every recovery journey is unique, we promote flexibility in beginning your rehabilitation with us at any stage and we encourage you to reach out to us to determine the best rehabilitation treatment plan for you.
